EDUCATION

FAST National University of Computer & Emerging Sciences — Lahore, Punjab
B.S. in Computer Science — Aug 2023 – Aug 2027

- **Courses:** Computer Vision, Natural Language Processing, Artificial Intelligence, Data Structures, Algorithms & Analysis, Database Systems, Computer Networks, Operating Systems, Object Oriented Programming, Programming Fundamentals

SKILLS

Languages: C++, Python, JavaScript, SQL
Frameworks: Django, REST APIs, React.js, Node.js
Tools: Git/GitHub, Google Colab
AI/ML: Pytorch, TensorFlow

EXPERIENCE

FAST National University of Computer & Emerging Sciences — Lahore, Punjab
Lab Demonstrator - *On Site* — Jan 2026 – Continue

- Graded and assisted 50+ students of Object Oriented Programming.
- Provided guidance in C++, problem-solving and core concepts like inheritance, polymorphism, abstraction etc.

RESEARCH

Ensemble Deep Learning for Multi-Class Chest X-Ray Classification — GITHUB
Detection of Tuberculosis and Pneumonia

- Implemented a soft-voting ensemble of five pretrained CNNs in PyTorch for chest X-ray classification, achieving 96.65% accuracy and 0.968 F1-score (TB).
- Implemented an end-to-end pipeline with transfer learning, data augmentation, and optimized training (AdamW + cosine annealing) for robust multi-class prediction.

PROJECTS

FastStay | Django, React, PostgreSQL — **LIVE** – GITHUB – **DEMO**
Hostel Recommendation & Management System

- Implemented a preference scoring recommendation (mess, distance, rating filters) to surface top hostel picks.
- Delivered Student, Hostel Manager, and Admin portals with role-based authentication, media uploads, ratings, suggestions, and approval workflows.
- Built a modular Django backend with services, validators, and stored procedures for efficient CRUD, approvals, and data handling.

MedAI | Django, LLM integration, React — GITHUB – **DEMO**
AI-Powered Medical Assistant

- Developed a multi-module MedAI clinical decision-support platform integrating lab analysis, triage, and medication safety using a unified workflow orchestrator.
- Implemented a multi-agent pipeline with multilingual triage and safety checks, delivering combined patient assessments.

MailSense | DRF, LLM integration, PostgreSQL, Gmail API**:** — GITHUB
AI-powered Gmail analyzer that ranks student opportunities from emails.

- GmailBased opportunity intelligence system that scans inbox/spam emails and ranks opportunities based on student profile.
- Implemented Gmail OAuth integration and email processing pipeline with token management, email extraction, and structured normalization of opportunities using Google Gmail API and PostgreSQL.
- Designed a hybrid AI + rule-based classification engine (Gemini + heuristics) to extract, classify, and score opportunities using skills, eligibility, deadlines, and profile matching logic.

CERTIFICATES

AI for All Backgrounds: The Complete Mastery Course Certificate , Python course Certificate
