EDUCATION

FAST National University of Computer & Emerging Sciences — Lahore, Punjab
B.S. in Computer Science — Aug 2023 – Aug 2027

- **Courses:** Computer Vision, Natural Language Processing, Artificial Intelligence, Data Structures, Algorithms & Analysis, Database Systems, Computer Networks, Operating Systems, Object Oriented Programming, Programming Fundamentals

SKILLS

Languages: C++, Python, JavaScript, SQL
Frameworks: Django, REST APIs, React.js, Node.js
Tools: Git/GitHub, Supabase, Postman

EXPERIENCE

FAST National University of Computer & Emerging Sciences — Lahore, Punjab
Lab Demonstrator - *On Site* — Jan 2026 – Continue

- Graded and assisted 50+ students of Object Oriented Programming.
- Provided guidance in C++, problem-solving and core concepts like inheritance, polymorphism, abstraction etc.

PROJECTS

FastStay | Django, React, PostgreSQL — **LIVE** – GITHUB – **DEMO**
Hostel Recommendation & Management System

- Implemented a preference scoring recommendation (mess, distance, rating filters) to surface top hostel picks.
- Delivered Student, Hostel Manager, and Admin portals with role-based authentication, media uploads, ratings, suggestions, and approval workflows.
- Built a modular Django backend with services, validators, and stored procedures for efficient CRUD, approvals, and data handling.

Arhtiya_ledger | Django, React, SQLite — GITHUB – DEMO
Real-time agricultural transaction ledger

- Manages end-to-end commission shop operations by digitizing clients, crop deals, item sales, and cash transactions in one integrated system.
- Automatically calculates crop expenses, commissions, and payable amounts to reduce manual accounting errors.
- Updates buyer, supplier, and shop balances in real time whenever a transaction is created, edited, or removed.

MovieMate | React, Node, MSSQL — GITHUB – **DEMO**
Cinema Movie Booking Web Application

- Movie ticket booking system with separate user and admin flows including authentication & role-based routing.
- Implemented SQL Server–based backend using stored procedures for managing movies, theaters, showtimes, bookings, payments, and user authentication logic
- Designed real-time seat availability system with a scheduled background job that automatically clears expired seat reservations every 5 minutes.

CERTIFICATES

AI Development & Python (Innovista)

- AI for All Backgrounds: The Complete Mastery Course — Certificate
- Python course — Certificate
